

# How HyperStudio Works

HyperStudio uses **CARDS** and **STACKS**

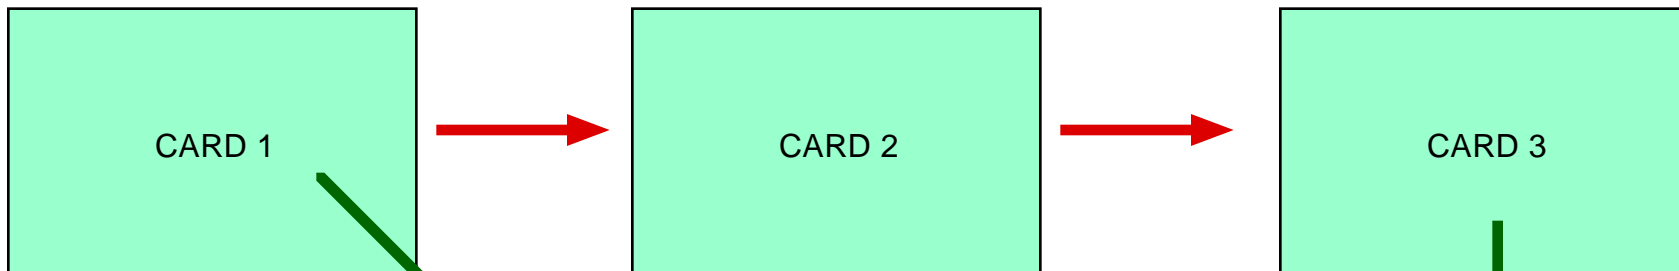

Each **CARD** represents a **computer screen**.

**CARDS** comprise a **STACK**.

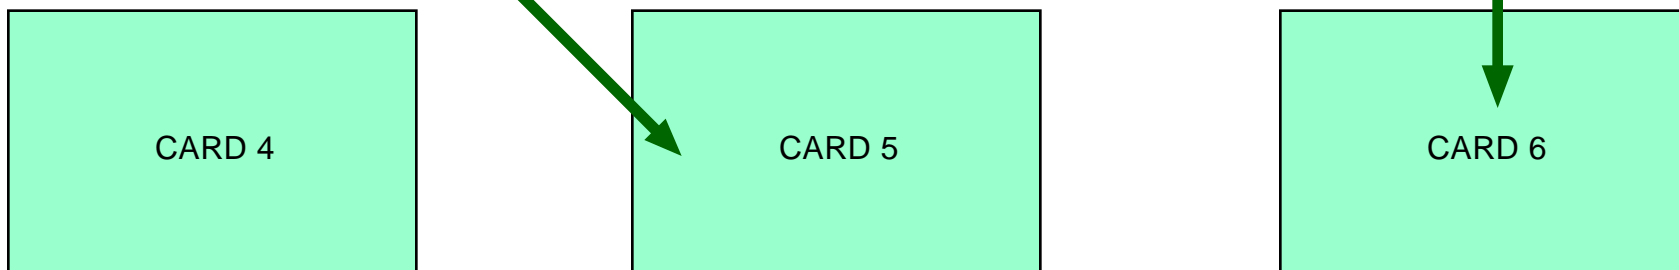

**CARDS** can be **LINKED** to each other in 2 different ways.

- Linear (1, 2, 3, 4, etc.)
- Non-Linear (1-3, 2-5, etc.)

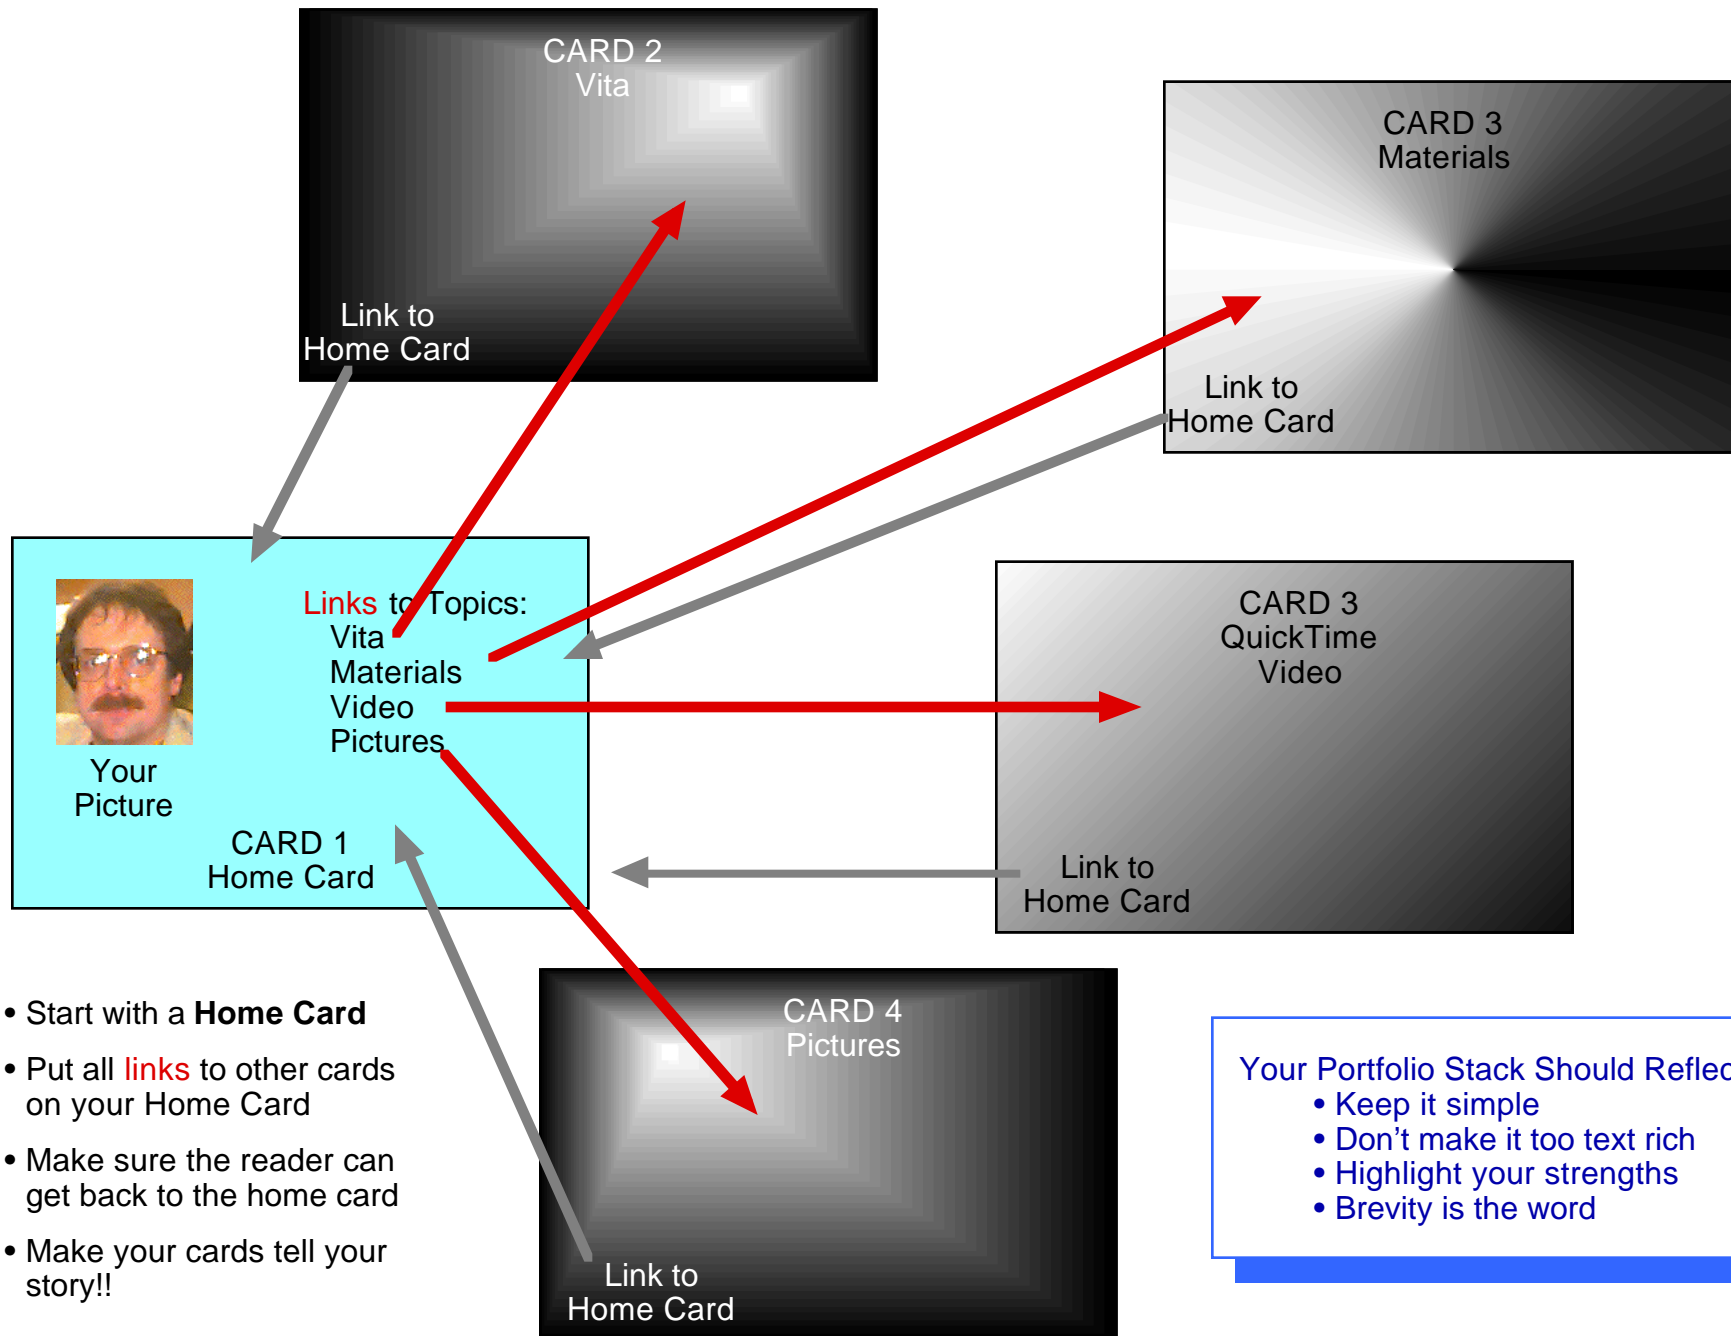

**Linear Links**, Card 1 linked to Card 2 which is linked to Card 3

**Non-Linear Links**, Card 1 linked to Card 5, Card 3 linked to Card 6

# Portfolio Stack Design Considerations

- Start with a **Home Card**
- Put all **links** to other cards on your Home Card
- Make sure the reader can get back to the home card
- Make your cards tell your story!!

Your Portfolio Stack Should Reflect **YOU!**

- Keep it simple
- Don't make it too text rich
- Highlight your strengths
- Brevity is the word
